NEW HARDY CHRYSANTHEMUMS

3 Outstanding 1941 Novelties

Eugene O. Wander. A big, brilliant, glistening golden-yellow beauty, flowering so freely that the stocky growing plant is almost obscured by its branching clusters of big double flowers—each one the height of perfection in form. Plant seldom exceeds eighteen inches and is in full flower by September 20th—therefore valuable where earliness is important. It is a hardy, easily grown variety, requiring no pinching or special handling to produce flowers 4½ to 5 inches across or larger if disbudded. Fine also for pot culture. NOTE: Occasional plants assume bronzy-yellow tints, but are just as attractive. 75 cts. ea.; 3 for \$2.00.

Mrs. Pierre S. Dupont III. The quality of iridescence is so pronounced in this fine new chrysanthemum that accurate description is difficult. The dominant shade is a soft peach tinted with rose-salmon and fawn shades; the whole overcast with an indescribably luminous sheen. It is entirely distinct and altogether lovely. The large, full perfectly formed flowers are carried on tall branching stems, making a strong, sturdy, 2½ foot plant. In full flower in early October; it will prove a grand addition to the garden and an invaluable cut flower variety. 75 cts. each; 3 for \$2.00.

Milky Way. A magnificent creamy-white that is outstanding among all white kinds; first for the remarkable intensity of its milky white color in the open flower; again for its rich dark green foliage which contrasts so effectively with the soft lemon tints of the opening flower, creating an effect distinctly different from that of any other white variety. A strong vigorous plant 2½ to 3 ft. in height, flowering in late September. 50 cts. ea.; 3 for \$1.40.

3 NEW SPOON CHRYSANTHEMUMS

Pink Spoon. Dainty single flowers of a light rose or shell-pink. The petals are tubular for most of their length, flattening out near the tips so that each petal really assumes the shape of a miniature spoon.

White Spoon. New beautiful white form.

Yellow Spoon. New yellow. Very lovely. Any of the above Spoon Mums 30 cts. ea.; 3 for 75 cts.; \$2.50 per doz.

SELECTED 1940 CHRYSANTHEMUMS

Acacia. A profusion of glittering, fragrant yellow blossoms in September. The blossoms, slightly over 1 in. across, are flat, semidouble. Height 2 feet. Late September. 35 cts. ea.; 3 for 90 cts.

Autumn Lights. Masses of coppery bronze semi-double blossoms, with a gleaming orange tone which illumines the bronze tints, two in. or more across. Height 18 in. Late September. 35 cts. ea.; 3 for 90 cts.

Early Wonder. One of the finest new hardy Chrysanthemums introduced in years. It is in full flower in late September and on. At first opening the flowers are dainty dawn and baby pink blending to peach blossom pink when fully open. The flowers are 2-3 inches. 40 cts. ea.; 3 for \$1.00.

Clara Curtis. The single salmon-pink Daisy-like flowers are about 3 in. in diameter and are at their best in August and early September. They are well arranged and bloom so early that they are never damaged by the frost. 35 cts. ea.; 3 for 90 cts.

LAWN GRASSES should be used at the rate of one pound to 200 square feet, 100 lbs. per acre. Very much better results can be had from lawn seeding if it is done early in the Spring just as soon as the soil can be conditioned, so as to allow ample time for development of a healthy root growth that will survive summer heat. **DO NOT** expect to have a good lawn on poor worn out soil. You must use lawn food.
